

DPS310 Pressure Shield2Go

Quick Start
V1.0.1

Introduction

The DPS310 is a miniaturized Digital Barometric Air Pressure Sensor with a high accuracy and a low current consumption, capable of measuring both pressure and temperature. The pressure sensor element is based on a capacitive sensing principle which guarantees high precision during temperature changes. The small package makes the DPS310 ideal for mobile applications and wearable devices.

The internal signal processor converts the output from the pressure and temperature sensor elements to 24 bit results. Each unit is individually calibrated, the calibration coefficients calculated during this process are stored in the calibration registers. The coefficients are used in the application to convert the measurement results to high accuracy pressure and temperature values.

The result FIFO can store up to 32 measurement results, allowing for a reduced host processor polling rate. Sensor measurements and calibration coefficients are available through the serial I2C or SPI interface. The measurement status is indicated by status bits or interrupts on the SDO pin.

Evaluation Board Notes

Notes

- Supply voltage is 3.3 V, please refer to [DPS310 datasheet](#) for more details about maximum ratings
- Pin out on top is directly connected to the pins of the DPS310
- If head is broken off, only two capacitors are connected to the DPS310
- Software compatibility with Arduino and library fully integrated into the Arduino IDE
- Standard delivery of the board in terms of interface mode is I²C with 0x77 when the 0 Ohm resistors are soldered as shown on the right picture

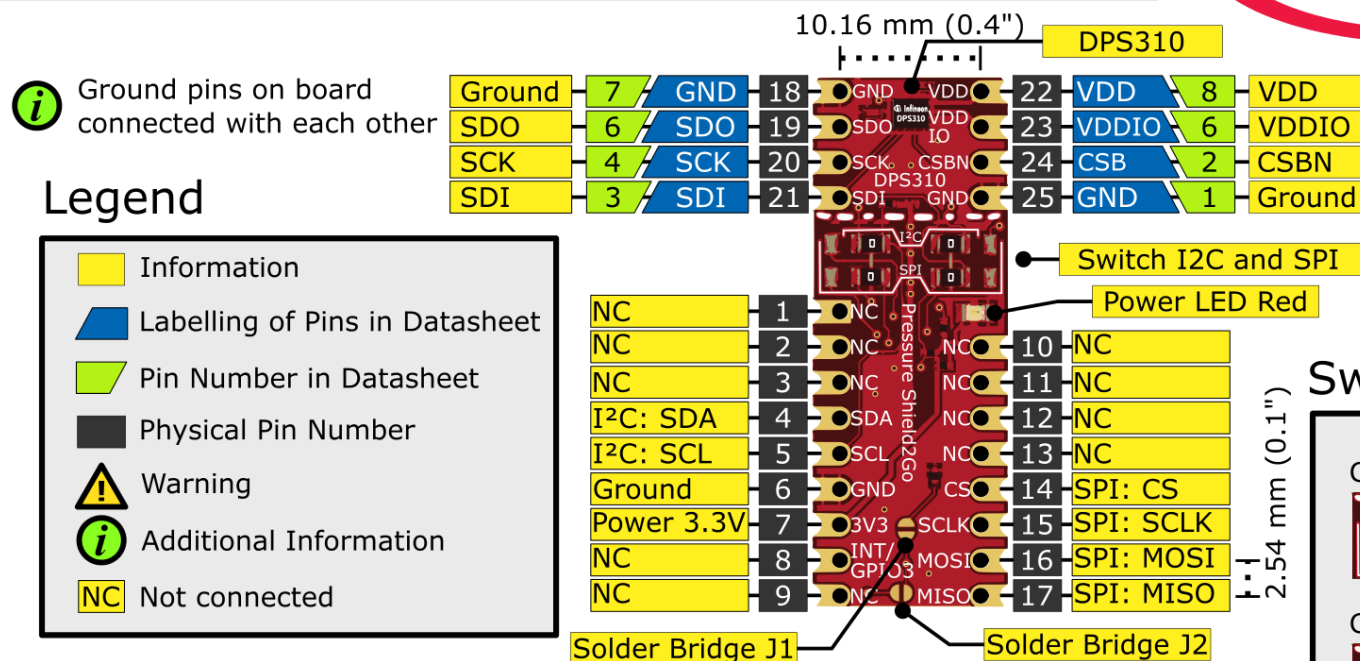

Ensure that no voltage applied to any of the pins exceeds the absolute maximum rating of 4 V

Evaluation Board PCB Details

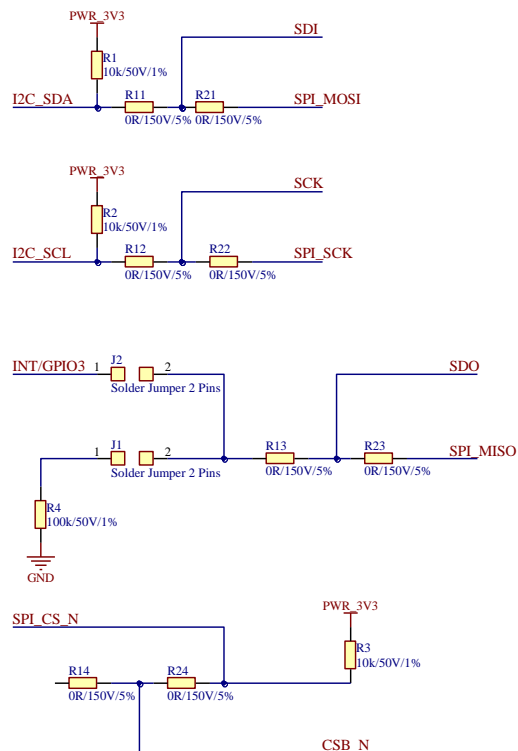

The

DPS310 Pressure Shield2Go

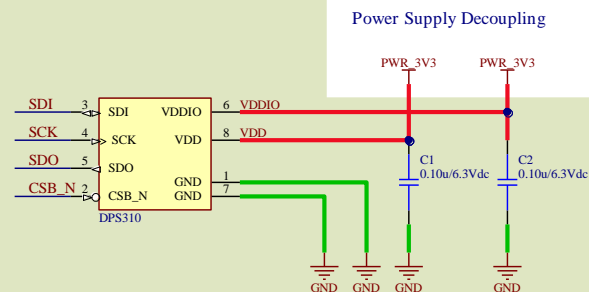

Evaluation Board Schematic

SPI/I²C Selection Circuit

- I²C with optional interrupt: 0 Ohm R11, R12, R13, R14 are soldered)
- SPI 4 Wire: 0 Ohm resistors R21, R22, R23, R24 are soldered
- J1 Jumper - If soldered, enables the pull-down resistor on the interrupt pin and changes the I²C address from 0x77 to 0x76)
- J2 Jumper - Can be soldered to connect the INT/GPIO3 pin

How to download DPS310 Arduino library - 1

Notes

- Open the Arduino IDE
- Navigate to *Sketch – Include Library – Manage Libraries*
- The Arduino library manager will be opened (see next slide for further instructions)

How to download DPS310 Arduino library - 2

Notes

- The Arduino library manager is a comprehensive tool to install external libraries for Arduino
- Select as *Type: All* and *Topic: All* when searching for *DPS310*
- As shown in the picture, please choose the respective DPS310 library
- Important Note: The name IFX_DPS310 might be different in the future. Please select the corresponding library for the DPS310 from Infineon
- In case of problems, please visit also our [GitHub repository](https://github.com/Infineon/DPS310-Pressure-Sensor) and open an issue to get further help

Example with XMC2Go

Notes

- The Shield2Go form factor of the DPS310 Pressure Shield2Go evaluation board is directly compatible with the [XMC2Go](#) board
- Stack the DPS310 Pressure Shield2Go board on top of the XMC2Go in the way as shown in the picture
- The additional pin on the left-top side (designated with NC) is left floating
- Using the [XMC-for-Arduino](#) Arduino integration, the [Arduino library](#) for the DPS310 can be directly used

Steps

- Open one of the examples for the DPS310 related to the configuration of your board (I²C or SPI) from *File - Examples*
- Connect the XMC2Go + DPS310 to the PC and press the *Upload* button
- Select the related COM port from *Tools - Port* and open the serial monitor with the set baud rate (see sketch/code with `Serial.begin(<BAUDRATE>);`)

Important Warning

Important Warning

- The DPS310 has a maximum rating of 4 V
- Third party boards with 5 V logic, e.g. the Arduino Uno, cannot be connected to the DPS310 Pressure Shield2Go board directly, even if the power is connected to the 3.3 V pin as the interface lines, e.g. SDA/SCL, will still be driven by 5 V
- Please use appropriate level shifting for these boards

Not possible

Part of your life. Part of tomorrow.
